

## Your Melmak device includes:

### Assembled Transducer Holder & Strap

- ♦ Utilized to position ultrasound transducer over fracture

### Ultrasound Gel

- ♦ 250 gram bottle. Gel to be applied to the ultrasound transducer head prior to treatment. This enables the ultrasound wave to transmit through skin to the treatment site. Only use Gel supplied by your local Melmak distributor.

### Battery Charger (including adapters)

- ♦ Used for charging the internal long life battery of the Melmak Device. International adapters are included.

### Patient Manual and Quick Notes

- ♦ Includes operation instructions

Ask your doctor for more information about how the Melmak Low Intensity Pulsed Ultrasound Device may help you to a faster recovery.

Faster Fracture Healing

Melmak Ultrasound  
Get Better Faster!

THE MOST PRECISE HEALING SIGNAL ON THE MARKET

## The Melmak LIPUS Device

The Melmak Device utilizes Low Intensity Pulsed Ultrasound (LIPUS) technology. Studies have shown that LIPUS devices can accelerate fresh fracture healing up to 38%, have an 86% healing rate for non-unions as well as reducing cast-time by 22%. This is particularly important in cases of pseudarthrosis, delayed healing, compound fractures and patients with additional health concerns such as smoking or diabetes. The Melmak bone stimulator offers a simple and painless application with or without a cast. It has over 20 years of proven results and has no known side effects.

## Only 20 Minutes A Day

- ◆ Specifically designed for self treatment, the Melmak Device can be applied in the comfort of your own home or office with no supervision by a medical professional
- ◆ Once positioned over the fracture site, operating the Melmak device is performed with a simple press of a button
- ◆ Large transducer for easier handling when mobility is limited.
- ◆ Small transducer for smaller bones.
- ◆ Only 20 minutes of daily treatment has the potential to dramatically accelerate the healing process.

## Talk To Your Doctor

Find out how to enhance your fracture treatment using the Melmak LIPUS Device.

The Melmak device should only be used as prescribed by your health professional.
